

General Principles - Check List	Status
Are unfinished/unpolished parts of the code clearly marked with "XXX"?	[]
Is standard practice like UTF-8 used for everything? Databases, Tables, DB connections, Strings, Content-type etc.	[]
Are compilation and any code generation automated? (Makefile, Ant, Maven, etc.)	[]
Does every piece of input that comes from an untrusted source (i.e. the user, or other systems) gets filtered? (Invalid characters, invalid type, etc).	[]
Do we prevent the users from uploading dangerous files? (php, cgi, exe, etc)	[]
Are all forms validated for consistency on the server side? (And, as needed, on the client side?)	[]
Are all the files in the project use the same indentation? (Tabs vs spaces, indent size, etc.)	[]
Is the code sufficiently (but not overly) commented?	[]
Does the team (or better, the company) has a task tracking system in place?	[]
Is the task tracking system viewed often enough (daily) both by team members and management?	[]
Can everybody assign tasks to everybody? (I.e., developers assigning tasks to management and sales?)	[]
Is there some way to request acceptance testing?	[]
